

Restrict API Access

Last Modified on 09/17/2020 11:39 am EDT |

The Alchemer API (Application Programming Interface) is used to integrate Alchemer into just about anything. If you wish to restrict access to the API altogether or restrict specific types of calls we have settings to help you do just this!

To get to these settings click **Account > Integrations > Manage API**.

You can restrict the specific methods for making API calls or restrict the use of OAUTH authentication. These settings are account-wide and will apply to all users on the account.

Manage API

API Access Rules Allow API access.
 Do not allow any API access.

API Access Rules Do not allow API GET calls.
 Do not allow API PUT calls.
 Do not allow API POST calls.
 Do not allow API DELETE calls.
 Do not allow access to the API using OAUTH authentication.

API Keys

Date Created	Status	User	API Key	API Secret Key
--------------	--------	------	---------	----------------

Create an API Key

Save

Below this you can generate API Keys for specific users. To learn more check out our Authentication Tutorial in our API knowledge base.
