Return Formats

Note: To view specific examples of return formats and fields, follow the below links:

- Versions 4 and below Returned Fields
- Version 5 Returned Fields

The API returns data as json by default, but you can also choose to return data in pson, xml and a 'debug' format. Simply specify the format as the file extension in the url.

json	api.alchemer.com/v4/survey/123456/surveypage/1.**json**
pson	api.alchemer.com/v4/survey/123456/surveypage/1.**pson**
xml	api.alchemer.com/v4/survey/123456/surveypage/1.**xml**
debug	api.alchemer.com/v4/survey/123456/surveypage/1.**debug**
jsonp*	api.alchemer.com/v4/survey/123456/surveypage/1.**jsonp**

We recommend creating a new API Key and restricting this API Key to GET access when using jsonp.
