

Version 5 Returned Fields

Last Modified on 09/17/2020 11:23 am EDT |

The API returns data as json by default, but you can also choose to return data in pson, xml and a 'debug' format. Simply specify the format as the file extension in the url.

json	restapi.alchemer.com/v5/survey/123456/surveypage/1.json
pson	restapi.alchemer.com/v5/survey/123456/surveypage/1.pson
xml	restapi.alchemer.com/v5/survey/123456/surveypage/1.xml
debug	restapi.alchemer.com/v5/survey/123456/surveypage/1.debug
jsonp*	restapi.alchemer.com/v5/survey/123456/surveypage/1.jsonp

**We recommend creating a new API Key and restricting this API Key to GET access when using jsonp.*

The API returns various fields for each object. The returned fields for many objects are straightforward. For more complex objects, we provide a list of the returned fields; check out the below linked documents for more info.
