Create Domain

Creates a new custom domain in your account.

Endpoint

> **PUT** v5/domain

Requires authentication

Path Parameters

None

Query Parameters

domain

string

required

The domain URL to register. Domains must be between 3 and 63 alphanumeric or hyphen characters. Your domain will automatically end with: `.alchemer.com`

type

string

The domain type. Accepted values: `Private` , `Subdomain` (case sensitive).

redirect

string

The survey-not-found redirect URL (e.g. `company.com`). Applies to Private domains only.

Response

Returns the newly created domain record nested under its domain ID key.

result_ok

boolean

Whether the request succeeded.

data

object

A keyed object containing the newly created domain record, where the key is the domain ID.

- ▼ child attributes

id

integer

The unique ID of the newly created domain.

customerID

string

The account (customer) ID this domain belongs to.

type

string

The domain type. Possible values: `Private` , `Subdomain` .

domain

string

The registered domain URL.

redirect

string

The survey-not-found redirect URL. Empty string if not configured.

eStatus

string

The domain status (e.g. `Active`).

created

string

Timestamp when the domain was created.

Examples

REQUEST (CURL)

```
curl -X PUT "https://api.alchemer.com/v5/domain?api_token=YOUR_API_TOKEN&api_token_secret=YOUR_API_TOKEN_SECRET&domain=surveys.yourcompany.com&type=Private"
```
