List Survey Options

Returns a list of all options for the specified survey question.

Endpoint

> `GET` v5/survey/{survey_id}/surveyquestion/{question_id}/surveyoption

Requires authentication

Path Parameters

The survey and question whose options should be retrieved.

survey_id

string

required

The ID of the survey containing the question.

question_id

string

required

The ID of the question whose options will be listed.

Query Parameters

This endpoint does not accept additional query parameters beyond authentication credentials.

None

Response

Returns a list of survey option objects for the specified question.

result_ok

boolean

Whether the request succeeded.

total_count

integer

Total number of options for this question.

page

integer

Current page index.

total_pages

integer

Number of available pages.

results_per_page

string

Number of options returned per page.

data

array

Array of survey option objects.

- ▼ child attributes

id

integer

The unique ID (SKU) of the option.

title

object

The display text of the option, keyed by language. Example: `{"English": "Yes"}` .

value

string

The reporting value of the option.

properties

object

Configuration properties set on the option. Only properties with non-default values are returned.

- ▼ child attributes

disabled

boolean

Whether this option is disabled and hidden from respondents.

other

boolean

Whether this option includes an open-text "Other" field.

requireother

boolean

Whether the "Other" text field is required when this option is selected.

na

boolean

Whether this option is designated as a "Not Applicable" choice.

none

boolean

Whether this option is designated as a "None" choice.

all

boolean

Whether this option is designated as a "Select All" choice.

fixed

boolean

Whether this option is pinned to a fixed position when randomization is enabled.

heatmap-color

string

Hex color code (without `#`) used to represent this option in heatmap reports.

Examples

NOTE GET requests are cached for 60 seconds. Repeated identical requests within that window will return cached results.

REQUEST (CURL)

```
curl -X GET "https://api.alchemer.com/v5/survey/YOUR_SURVEY_ID/surveyquestion/YOUR_QUESTION_ID/surveyoption?api_token=YOUR_API_TOKEN&api_token_secret=YOUR_API_TOKEN_SECRET"
```

RESPONSE

```
