

Get Quota

Retrieve details for a specific segmented quota on a survey.

Note: The Quotas object is designed for use with **Segmented Quotas** only. To manage an Overall Quota, use the Survey Object with the `options[overall_quota]` parameter.

Endpoint

GET /v5/survey/{survey_id}/quotas/{quota_id}

Authentication is required for all requests. See [Authentication](#).

Path Parameters

survey_id

integer

required

The ID of the survey that contains the quota.

quota_id

integer

required

The ID of the quota to retrieve.

Query Parameters

None

Response

Note: Quota fields are returned at the top level of the response object, not nested under a `data` key.

result_ok

boolean

Returns `true` if the request was successful.

id

string

Unique identifier for the quota.

name

string

The name of the quota.

description

string

A description of the quota.

limit

string

The maximum number of responses allowed before the quota closes.

responses

string

The current number of responses counted toward this quota.

distributed

string

Whether this is a distributed (percentage-based) quota. Returns `"true"` or `"false"`.

groups

array

Logic rule groups defining which respondents count toward this quota.

- ▼ child attributes

id

string

Unique identifier for this group. Required when updating rules via the Update Quota endpoint.

rules

array

The conditions within this group.

+ ► child attributes

Examples

REQUEST

```
curl -X GET "https://api.alchemer.com/v5/survey/123456/quotas/1?api_token=YOUR_API_TOKEN&api_token_secret=YOUR_API_TOKEN_SECRET"
```

RESPONSE

```
{
  "result_ok": true,
  "id": "1",
